

What

Where

When

911 Call

```
graph LR; What[What] --- Junction(( )); Where[Where] --- Junction; When[When] --- Junction; Junction --> Call[911 Call];
```

The diagram illustrates a process flow where three input categories—'What', 'Where', and 'When'—are combined to initiate a '911 Call'. Each input is contained within a rectangular box on the left side of the image. These boxes are connected by a vertical line that then turns right into a single horizontal arrow pointing towards a box on the right labeled '911 Call'. This visualizes the concept that all three pieces of information are necessary for a complete emergency call.
